Message: Please find below a proposed amendment to claim 93 in the above referenced application. This message is a request for a telephone conference to discuss this proposed amendment.

93. (Currently Amended) An apparatus comprising:

at least one sensor configured to monitor environmental conditions ambient to rack mounted computer equipment, the at least one sensor including an airflow sensor, the airflow sensor comprising:

- a first sensor exposed to airflow ambient to the rack mounted computer equipment;
- a second sensor shielded from the airflow; and
- a circuit coupled to the first sensor and the second sensor and configured to provide a signal indicative of the airflow;

a housing configured for mounting to a wall external to an equipment rack, the housing including:
 a processor responsive to the at least one sensor;
 at least one network interface responsive to the processor and configured for communication with a distributed computing network;
 a power control interface configured to access power management equipment;
 a web server configured to provide a web page associated with information derived from the at least one sensor;
 an email module configured to send notification of events associated with the at least one sensor;
 a simple network management protocol module configured to communicate with computer equipment external to the housing; and
 a modem responsive to the processor and configured to access a telephone line.
